

SEMI-AUTOMATIC LABELLING FOR ROUNDS *Fast*

Pk-62

DESCRIPTION

Pk-62 is a semi-automatic tabletop labeler that can reach production speeds of considerable interest. Thanks to automatic paper loading and quick format change, it can be easily used in all production environments and can be directly compared with automatic production lines for equal quantities of real production.

Typically, overall productivity is made up of labeling time plus tooling/machine adjustments time. In this type of comparison where the format changes are different and frequent, the Pk-62 becomes a winner, precisely allowing real productivity equal to about 2500 pcs / hour (an example with a product of 20mm in diameter and a la-

DESCRIPTION

bel of about 40 / 50mm).

Format changes take 2 minutes. Products with diameters between 10 and 40mm and label width (height on the product) up to 140mm can be processed.

PRODUCT FALLING SYSTEM: Pk-62 provides that the product falls after labeling (one or two labels) in an underlying container, at the edge of a table such as a box ready for shipment or other. The collection container is not provided and will be supplied only on request. The dropping system can be excluded with a selector allowing labeling of products with dimensions over 40mm or very delicate, which must not "fall". If the "do not fall" function is used, the products can also have larger diameters.

OPERATION: the product is placed on the rubber rollers and the pedal is pressed to start the labeling cycle which ends automatically with the product falling down into the collection container.

CONNECTIONS: Pk-62 can be connected to the most popular industrial thermal printers with save-ribbon also or to the HP technology inkjet marker for variable data printing. It can also be connected to the most popular in-line color printers for direct printing & applying to products in a single work cycle.

Pk-62
Made in Italy.

TECHNICAL CHARACTERISTICS

PRODUCTS DIAMETER MAX	40 mm
PRODUCTS DIAMETER MIN	10 mm
PRODUCTS HEIGHT	Up to 150mm
LABEL HEIGHT	from 20 to 140mm
PRODUCTIVITY	2500 pc/hour. Depending of labels length
PRODUCTS FALLING	Can be excluded for treatment of delicate or large products.
FRONT/REAR LABELS	yes
LABELS FEEDING	Patented feeding paper
START FUNCTION	With pedal
INKJET COULOR PRINTER CONNECTION	Yes, optional
THERMAL PRINTER CONNECTION	Yes, optional
INKJET CODER	Yes, optional
TRANSPARENT LABELS	Yes, optional
FALLING BASKET	Yes, optional
SPECIAL RUBBER ROLLER	Yes, optional
POWER	220/110 Vac 120W
COMPRESSED AIR	Yes
WEIGHT	30 Kg
DIMENSION	700x550x270(H.) mm.
